Everything under $HOME/bin!!!

- git
- github account
- unix

```
1  #!/bin/sh
2  java -Xmx1024M -jar `dirname
       $0`/sbt-latest/sbt-launch.jar "$@"
```

[1]

Giter8 is a command line tool to generate files and directories from templates published on github. It's implemented in Scala and runs through the Simple Build Tool launcher, but it can produce output for any purpose. [2]

Conscript is a tool for installing and updating Scala software programs. [3]

```
curl https://raw.github.com/n8han/conscript/master/ \\
  setup.sh | sh

cs n8han/giter8
```

Any github repository with g8 suffix.

```
g8 softprops/unfiltered
```

Publish your template as *yourtemplate.g8* to github and update giter8 wiki [4].
